

Controlling Mosquitoes by Releasing **More** Mosquitoes

Luke Alphey, BBSRC INNOVATOR OF THE YEAR 2014
The Pirbright Institute, & co-founder Oxitec Ltd, Abingdon

Tuesday 23rd September 7.30pm

Wallingford School Library, St George's Rd

Modern genetics can potentially provide new control methods, delivered by releasing engineered mosquitoes to mate with the target pest population. Such methods are potentially clean and environmentally-friendly. Products of genetic engineering have been well received in areas such as insulin & vaccines production but have proved controversial in other areas such as crop production, though responses vary considerably in different countries – how will engineered mosquitoes be received?

Join us at our **new venue, Wallingford School Library**, above the Sixth Form Centre, on St George's Road, Wallingford, OX10 8HH. All meetings are FREE and very informal. They are aimed at non-specialists and there is always plenty of time for questions and refreshments. Doors open from 7:00pm.
