

Fight for Sight

Maria Moreira Patricio, Nuffield Laboratory of
Ophthalmology, University of Oxford

Tuesday 27th September 7.30pm

Wallingford School Library, St George's Rd

Curing blindness has been the focus of many research groups over the years, and recent gene therapy approaches are very promising. The Nuffield Laboratory of Ophthalmology in Oxford is currently leading a gene therapy trial to treat choroideremia, an inherited disorder that causes progressive vision loss leading to complete blindness. The Laboratory is also developing treatments for other causes of macular and retinal degeneration.

Join us at **Wallingford School Library**, above the Sixth Form Centre, on St George's Road, Wallingford, OX10 8HH. All meetings are FREE and very informal. They are aimed at non-specialists and there is always plenty of time for questions and refreshments. Doors open from 7:00pm.
