

Hearing Hidden Sounds: How they could help us to predict the Weather

Andrew Charlton Perez and Graeme Marlon
University of Reading

Tuesday 8th May 7.30pm

Wallingford School Library, St George's Rd

Imperceptible to humans without specialist recording equipment, low-frequency sound waves are observed throughout the atmosphere. Where do these waves come from? How are they linked to nuclear non-proliferation, and why in the future might we use them to improve our long-range weather forecasts? You might also get to hear some of these sounds, if you listen carefully!

Join us at **Wallingford School Library**, above the Sixth Form Centre, on St George's Road, Wallingford, OX10 8HH. All meetings are FREE and very informal. They are aimed at non-specialists and there is always plenty of time for questions and refreshments. Doors open from 7:00pm.
